Quick-Reference Card: Industry-Specific AI Applications

FAST-07 · 7formations · Instructor: Wadood Chaudhary · Training, not legal advice

Sort every AI claim

Mature	Emerging	Hype
Wide use + evidence from businesses like ours	Real pilots; results still being studied	Absolute claims; no evidence

Ask: **Who uses it, in a business like ours, with what measured result?**

Never in a prompt

Name + SSN, license, account, or card number (93H, 201 CMR 17.00) · PHI (HIPAA) · bids, drawings, pricing, customer files · HR matters. Shared-printer test.

Sector task pattern

Messy input → prompt for your industry's format → check line by line against source and standard → record fixes and time.

Watch for: upgraded status · invented coverage or policy · changed numbers · dropped required action · unsafe advice · unauthorized promises.

Sign-off stays human

Safety → site supervisor · coverage → licensed adjuster or authorized agent · patient materials → owning clinician · work instructions → engineer · offers to guests → manager.

Do/don't lines

Short, specific, testable. Name the source. Confirm with your compliance lead.

Ask the vendor (in writing)

Data used? Stored where, how long? Trains models? Opt-out? Tested on businesses like ours? Review before send? Off switch? Logged?

Use-case brief

Task + volume · AI method + approved tool · data rules · risks → check + owner · indicator, baseline, target · review date + decision owner.

Benefit = old time − (draft + check + fixes). Measure first.
